

13
rib of the door is an abutment against a shoulder of the casing, thus preventing any disassembling of the door from the casing. Disassembling from the casing is made possible if the door is wide open. Then the shoulder does not prevent the sliding of the brackets of the door in a second direction, opposite the first one, along hinges of the casing. The invention makes it easy to change the door without any tooling, so that a user may choose the colour of the door according to their taste.--

REMARKS

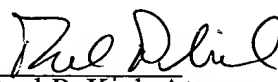

The title has been added to Page 1 of the application. No new matter has been added.

The claim amendments have been made to eliminate multiple dependencies, remove reference indicia and to conform with the United States practice. No new matter has been added.

To meet the requirements of the United States, the Abstract (as originally filed in the PCT application) is added. No new matter has been added.

No fee is believed to have been incurred by virtue of this amendment. However if a fee is incurred on the basis of this amendment, please charge such fee against deposit account 07-0832

Respectfully submitted,
Achuthan Srikumar
